Deliverable 6.4

Updated DEC Strategy and first reporting

Planned delivery date (as in DoA): M18
Due date of deliverable: 30/09/2021
Workpackage: WP6

Workpackage leader: EFI
Deliverable leader: EFI
Version: 1.0
Dissemination level: CO(nfidential)

Grant Agreement number: 101000574
RESONATE — H2020-RUR-2018-2020 / H2020-RUR-2020-2

Project Acronym: RESONATE
Project title: Resilient forest value chains – enhancing resilience through natural and socio-economic responses

Duration of the project: April 1st, 2021 - March 31, 2025

VERSION HISTORY

Version	Date	Author /Reviewers	Partner	Description
0.1	19.09.2022	Authors: Gesche Schifferdecker	EFI	Draft deliverable
0.2	27.09.2022	Reviewer: Elena Cantarello, Nina Horstmann, Marcus Lindner	BU, PI, EFI	Review of draft deliverable 0.1
1.0	30.09.2022	Gesche Schifferdecker	EFI	Final version for submission

Executive Summery

This deliverable contains both the reporting on RESONATE's Dissemination, Exploitation and Communication activities covering the first 18 project months as well as the updated Dissemination, Exploitation and Communication Strategy and Plan.

Keywords

communication, dissemination, exploitation, social media, communications strategy, communication monitoring and reporting

1. Introduction

This deliverable (D6.4) is part of Task 6.1 and consists of the first reporting and the updated Dissemination, Exploitation and Communication (DEC) Plan for the RESONATE project. The deliverable will be updated periodically over the lifetime of the project, with updates foreseen in M18 (September 2022), M36 (March 2024), M48 (March 2025). With the reporting we aim at sharing an overall status of RESONATE's communication, dissemination, and exploitation activities, while also considering the target key performance indicators specified in the DEC Strategy and measure them against actual impact.

With the updated DEC Plan and the related adaptations and specifications to the initial DEC plan documented in D6.1, we aim to ensure that RESONATE's activities and results continue to be communicated and disseminated to all relevant stakeholders as defined in D6.1, and that take-up of the project's recommendations, tools and results is continuously facilitated.

2. DEC Reporting

2.1 Products

2.1.1 Visual Identity

A visual identity was developed in month 5. All communication materials have been branded accordingly, including the RESONATE website, the RESONATE flyer, a PowerPoint template, social media content, videos, presentations and diverse visual offline or digital material. A set of brand guidelines and templates has been elaborated and shared on the project channel via MS Teams to ensure that these guidelines are followed.
Thus, RESONATES's brand is always consistent and recognized, by internal and external people.

2.1.2 Project Flyer

A project leaflet was created to give information about RESONATE and its objectives to a general audience. This acts as a "business card" to give target audiences a short summary of the project, and to stimulate their interest in participation or knowledge-sharing. It can be used at e.g. scientific and other conferences, meetings, workshops. The leaflet includes a project description and objectives, the EU logo and funding description, contact information, and is prepared with the RESONATE logo and brand colours.

The leaflet will be translated by partners into regional languages where relevant, and we have prepared a document for partners with all the elements in the flyer to make the translation process more convenient. It is available as an online version here: Shareble-PDF.pdf (resonateforest.org) and as print-on-demand in the RESONATE Teams folder.

2.1.3 Project PowerPoint presentation

A general PowerPoint presentation about the RESONATE project was created for all partners to be adapted to their needs when presenting information or RESONATE results at seminars/conferences. For internal purposes, copies of presentations from major project meetings as well as RESONATE presentations from external conferences are stored on the internal MS Teams communication platform.

2.2 Knowledge Transfer

2.2.1 External scientific events

To maximise RESONATE's scientific outreach, our researchers are encouraged to share information on the project as well as scientific output with scientific peers. This requires active participation in external events e.g. conferences, seminars, workshops etc, to present their work within RESONATE. More and more, these events will also be used to share outputs and recommendations. Detailed information on conferences, workshops, and other events attended by RESONATE researchers is available below in the Reporting Sheet.

2.2.2 Collaboration with sister project ONEforest

RESONATE established a regular exchange with both the project and the communication manager from our sister project ONEforest in month 10. With this exchange, we aim at updating on respective project progress and results, share each other's news via channels like Twitter and LinkedIn, and plan communication and research-related activities. One result of this exchange was the conceptualization and organisation of the "Exploring Forest Resilience" webinar series.

2.2.2.1 "Exploring Forest Resilience": RESONATE – ONE Forest webinar

The webinar series "Exploring Forest Resilience" is a collaboration of RESONATE and its sister project under the same call ONEforest. In this bi-monthly webinar, 2 early-stage researchers (one from RESONATE, and the other one from ONEforest) present the topic they work on in the format of inspiring presentations (TED talks style). The objectives of the webinar for the researchers – apart from learning how to present in an engaging format – is to receive feedback on projects or papers, to find out what other researchers are doing, and finally, to build a network for future collaboration.

We already hosted 2 webinars, and 2 of 4 presentations were shared via Youtube:

The uptake of heavy metals in hybrid aspen plantations - YouTube (Marja Kaivapalu)

Enhancing the resilience of European forests - from concept to forest management application - YouTube (Laura Nikinmaa)

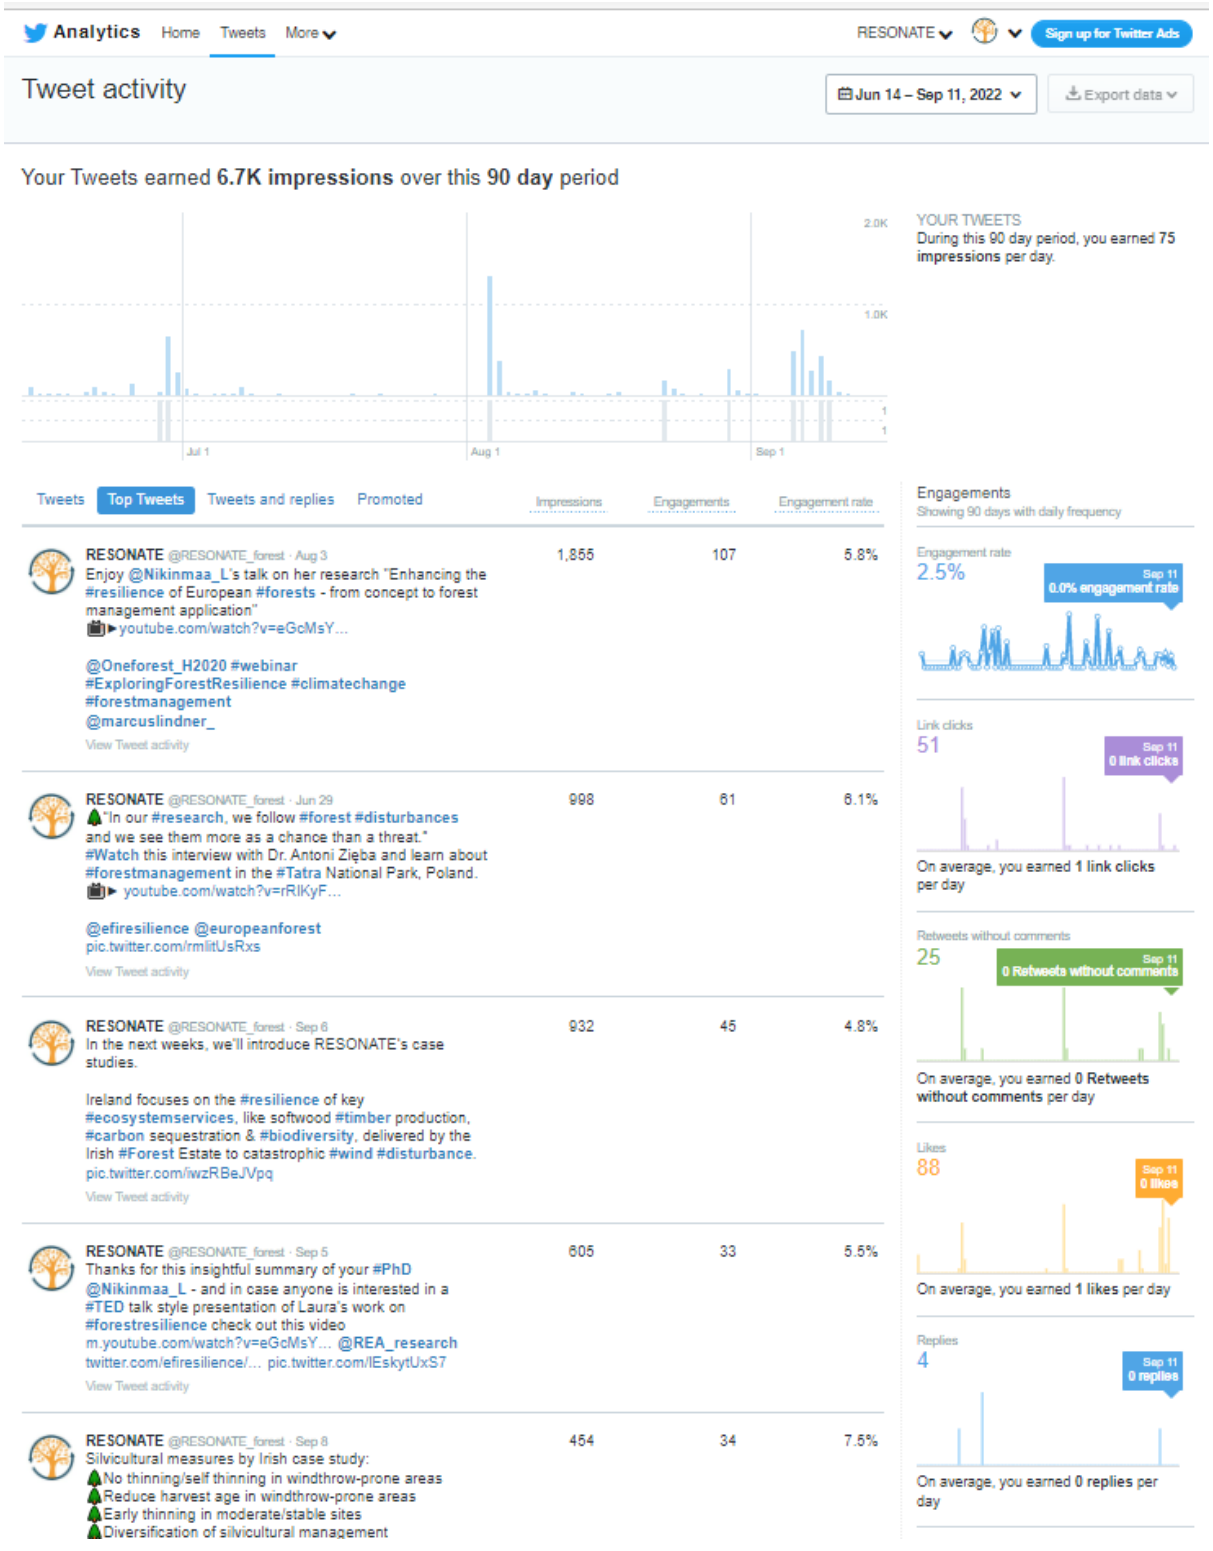
2.2.3 IUFRO World Congress 2024: Planning of joint session

Both ONEforest and RESONATE coordinators, supported by Comms experts, have developed a session proposal for the upcoming IUFRO World Congress in 2024, which addresses central themes of the Conference. More information on this session will be described below in Chapter 4.

2.3 Impact

2.3.1 Twitter

In August 2021 we set up https://twitter.com/RESONATE_forest and reached not only 794 followers (30.09.2022) but also an impressive engagement rate, as demonstrated in the exemplary statistic below



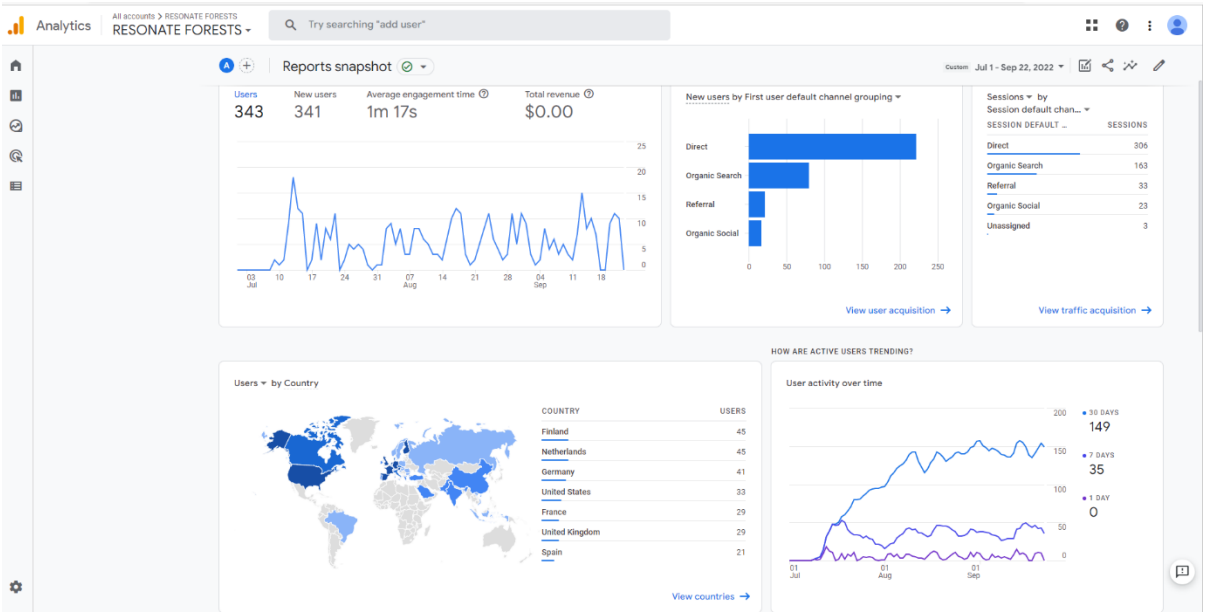
Project Twitter account analytics of a 90-day period, from June 14 - September 11, 2022

To attract followers and increase engagement, we e.g. planned several Twitter campaigns, prepared Social Media cards, and encouraged researchers in RESONATE to engage and support. Twitter campaigns included a campaign for the International Day of Women and Girls in Science, where we engaged some of RESONATE's female researchers. More campaigns were prepared for the International Day of Forests (21 March 2022) on the

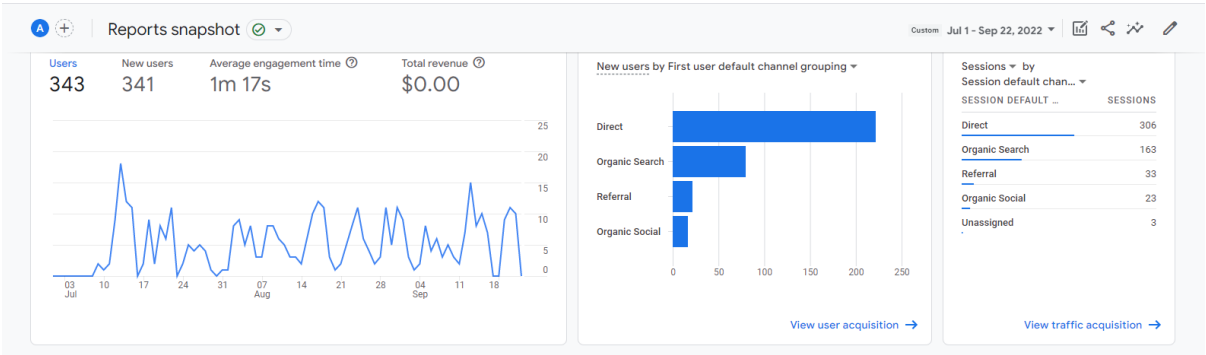
RESONATE project objectives, and on different definitions of Resilience. Finally, we started a campaign on the 9 Regional Case studies in September 2022 to introduce the disturbance challenges, tree species composition, forest area, etc. A big contribution to our Twitter success was made by both researchers and institution involved in the consortium who are active on Twitter, and who tweeted tagging RESONATE, as well as retweeted and thus shared RESONATE communication with their respective national and international networks of stakeholders from academia, media, forest practice, policy and value chains.

2.3.2 Website

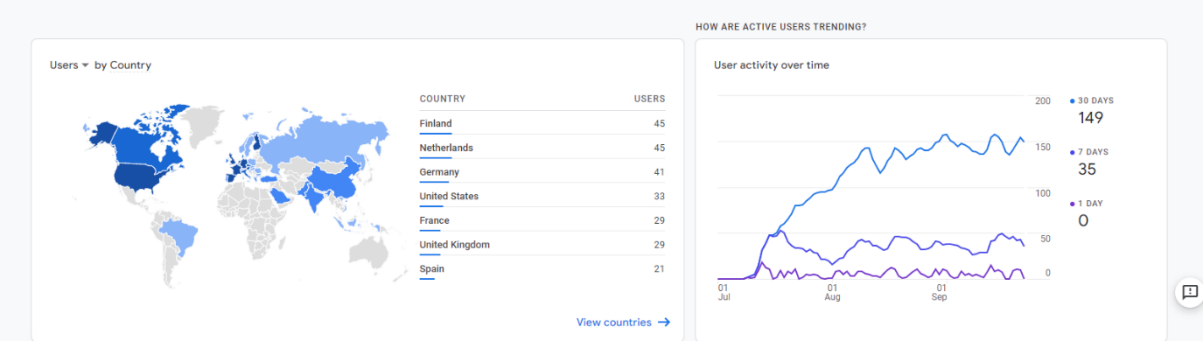
We set up our project website https://resonateforest.org in November 2021 as the main hub where all project information is gathered. In the past 3 months (July 1st - September 22nd 2022), we have an average of 114 users per month (with September being inconclusive). On the News subpage News (resonateforest.org, we post ca. 2 news items per month (16 posts since December 2021). We encourage an active exchange about the posts with the comment function and add resources like videos, selected readings and papers published as part of the project under Resources (resonateforest.org).



Google Analytics overview of the RESONATE website (resonateforest.org) from July 1st to September 22nd, 2022



Google Analytics overview zoom



Google Analytics overview zoom

Results of the Google analytics (ca. 100 visitors per month) identify the need to promote the website more through Social Media, which we will continue to do so, especially with the ongoing case study social media campaign (see chapter 2.1.3). The results of the organic search are good though (second box next to the overview), and since we are publishing most of the posts first on EFI's Resilience Blog and directly link them these statistics need to be considered as well. For the Resilience Blog, statistics below suggest that RESONATE-related articles have between 80 and 200 unique visitors. We have chosen these statistics as an example, because in these months we had particularly successful blog posts by RESONATE researchers. One example for a very successful blogpost in November was a contribution of Nicola Bozzolan (WR) with 505 page views, more examples in January 2022 came from Tomas Hlasny (CZUP) "An Orwellian Debate on the National Parks in Slovakia" (314 page views), and Laura Nikinmaa's blogpost "Disturbances, forests, and people: operating the world of Resilience" (138 page views).

2.3.3 Bi-annual newsletter

The RESONATE Newsletter collects and shares most important project news on meetings, activities, research, new knowledge. It is a synopsis of news shared on the website. The newsletters were shared via Twitter, and they are available on the website under Resources (resonateforest.org) both in a written and in an audio format. The newsletter goes out to the project partners (encouraging them to share it), to those who signed up for it at a dedicated page and to those who have signed up for EFI newsletters on Resilience-related topics. Altogether, it is sent out to a group of ca. 200 relevant stakeholders.

Here are the newsletters we have already sent out:

RESONATE-Newsletter-01.pdf (resonateforest.org)

RESONATE-NEWSLETTER-06.22.pdf (resonateforest.org)

2.3.4 Storylines

One Storyline was developed in collaboration with the German Prince Konstantin zu Salm-Salm and provided the perspective of a forest owner with more than 100 Hectares productive forest, who faced severe windstorm disturbances in on his land ca. 30 years ago, which killed almost his entire spruce. Gesche Schifferdecker and Marcus Lindner travelled to his forest for an excursion in Autumn 2021, where they met Andrew Curry, a journalist working for The National Geographic, who had planned to write an article on natural regeneration after disturbances. This led to a contribution of the perspectives and knowledge of both Marcus Lindner and Prince Salm-Salm in the article on “Leave forests alone to heal themselves” in a National Geographic publication focusing on forests worldwide, published on 14th April 2022: 4 solutions for trees and forests threatened by a hotter world (nationalgeographic.com) targeting the general public. Another example for a storyline from the perspective of a researcher was the blogpost Wrangling resilience from

concept to forest management application - Resilience Blog (resilience-blog.com) and the Youtube video with a TED-talk style presentation Enhancing the resilience of European forests - from concept to forest management application - YouTube

with already 150 page views by RESONATE researcher Laura Nikinmaa, who described her journey as a PhD student working on forest resilience for several years before she completed her thesis in August 2022.

2.3.5 Videos

All RESONATE videos are stored in a designated channel on Youtube, as part of EFI's Youtube account with more than 1750 followers, to increase visibility. RESONATE videos have between 50 and 300 views, as specified in the Excel sheet shared under 2.3.6.

2.3.6 Media engagement

RESONATE researchers engaged with national and international media and were either quoted in or contributed to media outputs. One example is Marcus Lindner's interview for a publication on How forests can adapt to climate change and remain long-term carbon sinks | UPM.COM published by UPM, a globally operating Finnish forest industry company, addressing value chain stakeholders. Another example was Gert-Jan Nabuurs contribution to the Dutch "De Volkskrant" https://www.volkskrant.nl/wetenschap/er-komt-steeds-meer-bos-bij-in-europa-maar-de-kwaliteit-is-slecht~b4dac2dc/ or Francisco Lloret's interview with the Spanish "El Pais" on the resilience of our forests Francisco Lloret: "Amamos los bosques… pero nos causan fastidio" | Clima y Medio Ambiente | EL PAÍS (elpais.com).
A more detailed list of media contributions can be found below in the dissemination and communication reporting sheet below.

2.3.7 Reporting Sheet

We can summarize here that in this reporting period we have had more than 40 contributions of RESONATE researchers to scientific conferences and workshops. In addition, RESONATE researchers organized several workshops themselves, amongst others the conference in Berchtesgaden organized by Cornelius Senf and Rupert Seidl (TUM) on "Forest disturbance and ecosystem dynamics in a changing world" in September 2022. We have had ca. 20 contributions to local, national and international media targeting mainly the

general public, and even one book published for broader audience by Fransisco Lloret: https://arpaeditores.com/products/la-muerte-de-los-bosques. Furthermore, we had more than 25 contributions via social media, amongst others Social Media campaigns and Youtube videos, and more than 100 targeted RESONATE-related tweets and several more re-tweets by RESONATE researchers. Our partners published 5 press releases via their organizations, and more than 15 contributions to both RESONATE and project partner's websites.

Finally, there were 4 peer-reviewed publications published in the framework of RESONATE, which are available here.

The complete Excel sheet can be accessed here: RESONATE - Dissemination Communication Activities reporting.xlsx - Google Tabellen and via the website Resources (resonateforest.org)

2.3.8 Reference to KPI's

Means of dissemination	Description	Target KPI	Target group	Evaluation
RESONATE website	Central information hub, providing open access to all products (project results, publications, social media etc.) developed in the project framework and linking to relevant initiatives and outputs beyond.	~ 300 visitors/ month	All target groups, but mainly researchers and forest practitioners	We have less visitors than anticipated, with many visitors of the Resilience blog. Still, website views shall be improved.
RESONATE Newsletter	Newsletters will collect and share most important project outputs: meetings, activities, research, new knowledge	8 newsletters distributed	Mainly researchers, forest value chain stakeholders	2 newsletters sent out to ca. 200 relevant stakeholder, mainly researchers, number of value chain stakeholders can be improved
Policy Workshop	Dissemination of project results via policy brief and presentations will take place involving INNOVAWOODs broad network and elaborated contact database and register of multiple stakeholders, aiming at fostering exchange and partnering with other related EU projects and initiatives.	15-20 participants	Brussels-based policy makers, forestry associations	Upcoming
Road Show	Selected decision makers identified as part of the stakeholder mapping are approached in a road show in the final year of the project. Meetings will involve a	15-20 selected stakeholders and organisations	Forest policy, forest owner associations, forest industry in	Upcoming

	briefing based on the project results.		Brussels and beyond	
LIGNA side-event	In the framework of the international wood trade fair LIGNA, an event will be organized (2023) to introduce results of RESONATE's research on forest value chain resilience enhancement	20-25 participants	Forest industry stakeholders	Upcoming, for first explorations see chapter 4.2
Side-event to forest owners conference	In (a) side-event(s) to a European Conference targeting forest owners (e.g. EUSTAFOR, CEPF, ELO), projected future disturbance hotspots and the resilience dashboard tool will be presented and further forest management guidance for enhanced forest resilience provided	~40 participants	Forest owners	Upcoming
Scientific articles	Publication of scientific project results in high-quality scientific journals with open access	20-25 publications during and after project duration	Researchers	4 publications published since beginning of the project, currently ca. 5 either submitted or under development
Publications in practitioners' magazines	Dissemination of project results via different practitioners' magazines in selected case study countries and beyond, introducing main RESONATE decision support tools, e.g. the online Resilience Dashboard for enhanced resilient forest decision making and management, or the forest value chain resilience ladder	>5 publications in 3 different languages (German, Spanish, English)	Forest practitioners	Upcoming
Policy briefs	Development of 2 policy briefs, one on enhancing biodiversity to facilitate improved forest resilience and one on resilient forests and related value chains.	2 policy briefs	Forest policy, forest value chain stakeholders	Upcoming
Publication in forest industry/trade & forest association	Development of short articles on how to enhance value chain resilience, integrating information on 1) the map of stakeholder's perception of forest-based value chain	>2 publications during project duration	Forest industry/trade, forest association	Already 1 as indicated in reporting sheet (published by Marcus Lindner), furthermore, e.g.

outlets/magazines	resilience and/or 2) the perception-effect matrix covering all identified drivers of forest value chain resilience (to be e.g published via magazines for the Wood and Furniture Industry such as the Spanish "Madera Sostenible")			Juan Picos, Marcus Lindner, Gesche Schifferdecker participated in events targeting industry stakeholders
Publications in national and international media	RESONATE will use established contacts and build new relationships with both national and international media to place interviews with researchers on project topics, contribution to articles etc.	~4-5 publications per year	Society	Ca. 20 according to Excel Reporting sheet
Resilience Modules for educational use	RESONATE will develop online courses and modules for university courses and training of professionals to introduce different aspects of forest value chain resilience in an innovative manner.	> 15 universities or education institutions incorporating material from the resilience modules	Students, (BSc & MSc/PhD), forest professionals (e.g. practitioners, representatives of forest associations	Under development, first course on forest resilience will be taught at Freiburg University in winter 2022/23 by Jürgen Bauhus
Partner dissemination networks	Partner dissemination networks will be used for regular dissemination of project results and outcomes through newsletter articles, interviews with project partners and stakeholders and the distribution of products and materials	>10 international networks >8 national networks	Researchers, forest practitioners, forest owners	DFWR, InnovaWood have been used as dissemination networks

3. Main deviations, justification, impact, and mitigations

It was planned to develop a project flyer already in month 9 as part of D6.2 (development of information material). However, we decided to use the first newsletter instead of creating a project flyer to facilitate the online communication on RESONATE and spread of the word in times when physical events are not possible. A project flyer was designed at a later stage of the project (in month 13/May 2022), to be shared as a printout at in-person events.

It was planned as a responsibility of Task 6.3 to create a list of RESONATE partner's European and national media contacts, which will be kept up-to-date with relevant news about the project or invited to workshops and events. This list was supposed to be in line with the European General Data Protection Regulation (GDPR). This list has not been created yet, but due to GDPR-related matters – and on the other hand the proven successful

outreach of partners already taking place – we believe we should not create this list, but trust partners' established contacts and further support their outreach activities.

Due to technical reasons, we were only able to collect Google analytics for the RESONATE website from June 2022 onwards.

4. Updated Strategy and Planning

4.1 Internal Communication

Efficient internal collaboration can be challenging in a project as large as RESONATE. To keep partners informed about the project's main developments, status of each WP, relevant events, learning opportunities, upcoming activities and media coverage of the project, an internal newsletter has been created, with the first edition published in October 2022. Contributions were mainly based on SC Meeting outputs. The newsletter is published on a bi-monthly basis and widely distributed within the consortium, helping to foster collaboration between different WPs and task leaders. Furthermore, the RESONATE Comms Team is responsible to manage a smooth interaction of project members via the project platform MS Teams.

4.2 LIGNA Side-event

For the planned LIGNA side Event, RESONATE coordinator and Communications manager have been in contact with the company Siempelkamp, a market leader in the field of construction of complete wood-based panel plants. The contact has been facilitated by the so-called "Innovationsradar North Rhine Westphalia", an initiative of the NRW Ministry for Agriculture and Consumer Protection, who approached RESONATE for a contribution to its publication on the topic of climate change adaptation which will be published end of 2022.

The conversation explored a potential collaboration in the framework of the LIGNA to raise the awareness about resilience of forest value chains among forest sector companies and stakeholders that needs to be further explored.

4.3 IUFRO World Congress 2024

In the session planned by RESONATE and ONEforest we will present results from both projects on the topic of forest resilience and aim to exchange experiences with other related research initiatives. Presentations will introduce the RESONATE resilience assessment framework and the ONEforest multi-criteria decision support tools along with numerous case studies assessing forest and forest value chain resilience in Europe and elsewhere. Particular focus will be placed on transferring scientific analysis into guidance and knowledge applicable in practice. Our projects will specifically encourage early-stage-researchers to submit abstracts.

4.4 Updated DEC Plan

Activities completed in 2021 (for more detailed information please check 2.3.7)

Date	Activity	Responsible partner	Audience
August	Establishment of Twitter account	EFI	education & research; extension services, forest

			owners, and practitioners; forest industry; media and society**.**
End of October	Exchange with OneForest	EFI	education & research
End of October	Publication of news item introducing RESONATE	EFI	education & research; forest owners, and practitioners; forest industry; media and society
Beginning of November	Publication of first newsletter based on news item to introduce RESONATE	EFI	Science & Education, practitioners, forest industry
End of November	RESONATE website online	EFI, all partners	All audiences
November	PowerPoint Template	EFI	Education & research mainly
Events, participation in other seminars			
4-5 April 2021	Kick-off meeting	EFI	Project internal
4-6 October 2021	Project Meeting	EFI, CZUP	Project internal
October 2021	Introduction of RESONATE at Stakeholder Meetings in Galicia	UVIGO	education & research; practitioners; forest industry
October 2021	Introduction of RESONATE at XV Conference of the Spanish Society of Terrestrial Ecology	CREAF	education & research

Implementation Plan 2022

Date	Activity	Responsible partner	Audience
February	Campaign for International Day of Women and Girls in Science	EFI, CREAF, CZUP	All audiences
